[andriitarasov.de](https://andriitarasov.de) | Dortmund, Germany

## PROFILE

IT specialist with two years of professional experience at the intersection of IT infrastructure and application development. Hands-on practice administering Windows and Linux servers, Active Directory, Microsoft 365 and virtualisation, as well as running containerised services with Docker and Kubernetes. Focus on integrating and automating existing systems through webhooks and REST interfaces. Holder of four Microsoft Applied Skills credentials covering Active Directory, Microsoft Entra, Azure and AI automation. Completed both a B.Sc. and a German IHK apprenticeship by the age of 22, learns new systems quickly and is open to further training and certification.

## SKILLS

|                                  |                                                                                                                                                  |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>System administration:</b>    | Active Directory (DS), Microsoft Entra ID, Microsoft 365, Windows Server, Linux (Ubuntu, CentOS), user and permission management, group policies |
| <b>Virtualisation:</b>           | VMware, Hyper-V, Docker, Kubernetes                                                                                                              |
| <b>Cloud:</b>                    | Microsoft Azure (resource, identity and access management)                                                                                       |
| <b>Network &amp; operations:</b> | TCP/IP, DNS, DHCP, REST interfaces, webhooks, monitoring, Jenkins CI                                                                             |
| <b>Storage &amp; service:</b>    | Storage and backup concepts, ITIL service processes (apprenticeship content)                                                                     |
| <b>Automation:</b>               | Python, Bash, n8n, Ollama (on-premises AI), MLflow                                                                                               |
| <b>Ticketing &amp; tools:</b>    | Jira, Confluence, Rocket.Chat, Salesforce CRM, Git, Shopware                                                                                     |
| <b>Development:</b>              | Java (17/21), Spring Boot 3, Python/FastAPI, Kotlin, TypeScript, SQL, PostgreSQL, React, Vue.js, Angular, PHP                                    |
| <b>Languages:</b>                | German (C1), English (B2), Russian & Ukrainian (native)                                                                                          |

## PROFESSIONAL EXPERIENCE

### Freelance IT Professional

Client project, logistics: warehouse management system

Jun. 2026 – present

Dortmund (remote)

- Built and deployed a warehouse management solution consisting of an Android client (Kotlin) and a server application (Spring Boot 3, PostgreSQL), including database setup, backups and versioned database migration

### tyntec GmbH

Software Developer with a focus on systems integration and automation

Aug. 2024 – Jun. 2026

Germany

- Administration and support of the internal IT environment: user and permission management in Active Directory and Microsoft 365, maintenance of Windows and Linux servers and day to day support for colleagues
- Built an on-premises service for automated ticket triage (Python, FastAPI, Ollama) running on in-house hardware with no data leaving the infrastructure; cut manual effort by roughly 7 minutes per ticket, about 552 hours and €22,080 saved per year with a payback period of around 6 weeks
- Integrated several systems into one end to end process: Jira webhooks, the internal AI service and Rocket.Chat were connected through a routing service, including automatic reply drafts and ticket assignment from chat
- Deployed and operated the services in containers using Docker and Kubernetes, with automated builds and tests through Jenkins CI
- Designed and built a central phone number inventory interface (Java 21, Spring Boot 3, PostgreSQL, OpenAPI) covering 56 providers and around 18,600 customers worldwide
- Replaced a legacy application (Java EE / EJB) with a modern solution based on Spring Boot 3 and React 19, including data migration and improved maintainability
- Contributed to a messaging platform (SMS, WhatsApp, RCS, Viber, TTS) connecting external providers via SMPP and REST

### Kharkiv National University of Radio Electronics (NURE)

University project, automation and control engineering

2024 – 2025

Kharkiv, Ukraine

- Developed an automated electropneumatic control system for a production line and analysed automation systems

## EDUCATION AND CERTIFICATIONS

### Robert-Bosch-Berufskolleg, City of Dortmund

Apprenticeship as IT Specialist for Application Development (IHK)

2024 – 2026

Dortmund, Germany

- Apprenticeship shortened by one year for strong performance at the company and at vocational school, final school grade 2.3, additional qualification in Digitality in Vocational Education
- Coursework included networks, server operations, storage and backup, ITIL service processes, virtualisation, Java, Docker, Kubernetes and CI/CD

### Kharkiv National University of Radio Electronics (NURE)

B.Sc. Automation and Computer-Integrated Technologies

2021 – 2025

Kharkiv, Ukraine

**Microsoft Applied Skills (2026):** Administer Active Directory Domain Services | Manage identities and access with Microsoft Entra | Perform Azure management tasks | Develop an agent with integrated tools
