PROFILE

Software engineer with a B.Sc. in Automation and Computer Integrated Technologies and a completed IHK apprenticeship as IT Specialist for Application Development, both finished by the age of 22. Hands on experience in Java, Python and TypeScript across backend services, REST APIs and web frontends, with a track record in debugging complex distributed systems, resolving performance bottlenecks and refactoring large legacy codebases. Used to owning features end to end, from requirements analysis to release, and to documenting technical decisions clearly. Additional experience with LLM based services and model evaluation.

CORE SKILLS

Languages	Java 17/21, Python 3, TypeScript, JavaScript, Kotlin, SQL
Engineering	Algorithms and data structures, debugging and profiling, performance optimisation, legacy refactoring, clean code, code review
Backend & APIs	Spring Boot 3, FastAPI, REST, OpenAPI, microservices, webhooks, JPA, Hibernate, Flyway
Frontend & Data	React 19, Material UI, PostgreSQL, SQLite, data modelling, query tuning
Testing & Docs	JUnit, unit and integration tests, Testcontainers, root cause analysis, API and architecture documentation
AI & Automation	LLM integration, Ollama, MLflow, Label Studio, prompt design, process automation
DevOps & Tools	Docker, Kubernetes, Jenkins CI, Git, Gradle, Maven, Jira
Spoken languages	German C1, English B2, Ukrainian and Russian native

PROFESSIONAL EXPERIENCE

Freelance Software Engineer **since 06/2026**
Client project: logistics and warehouse management system *Dortmund, Germany*

- Own the project end to end, from requirements gathering and architecture decisions to implementation and release
- Build an application for storage locations, zones, stock levels and inbound and outbound processes, with automated allocation rules in Kotlin and SQLite
- Responsible for data modelling, testing, defect analysis and documentation

Software Engineer / IT Specialist Application Development **08/2024 – 06/2026**
tyntec GmbH *Germany*

- Designed and built a phone number inventory platform with Java 21, Spring Boot 3 and PostgreSQL, serving 56 providers and around 18,600 customers
- Modernised a legacy Java EE and EJB application into a Spring Boot 3 backend with a React 19 and TypeScript frontend, refactoring a large codebase in incremental steps
- Debugged and resolved complex defects and performance bottlenecks across distributed services, from slow database queries to API latency and integration failures
- Built an on premise AI service in Python and FastAPI for automated support ticket triage, saving roughly 7 minutes per ticket, and ran a structured LLM model evaluation with MLflow and Label Studio
- Secured quality through unit and integration tests, Testcontainers and Jenkins CI, and wrote the technical documentation for APIs and architecture

University projects: automation and control engineering **2024 – 2025**
Kharkiv National University of Radio Electronics *Kharkiv, Ukraine*

- Developed and modelled an automated electropneumatic control system for a production line
- Analysed automation systems and created technical 3D models of pneumatic components

EDUCATION

IT Specialist for Application Development (IHK) **2024 – 2026**
Robert Bosch Berufskolleg with tyntec GmbH *Dortmund, Germany*
German dual apprenticeship in software development, data management and IT systems, shortened to two years based on performance.

B.Sc. Automation and Computer Integrated Technologies **2021 – 2025**
Kharkiv National University of Radio Electronics *Kharkiv, Ukraine*
Focus areas: software development, systems analysis, databases, industrial computer systems and control engineering.
